MS18 Bug Box – Insect Habitat

Description:

This new small double chambered insect habitat (top varying size canes - bottom solid bored timber) is ideal for hanging in a sheltered garden or house wall or orchard. This is a general insect habitat. The holes may be used by solitary bees such as Mason Bees or Leafcutter Bees, which are non aggressive and excellent for pollinating in the garden, helping to increase fruit yields. The durable roof and solid timber construction give excellent insulation for over wintering Ladybirds and Lacewings. Site using back hanger or central hanging chain if preferred in a sheltered spot, preferably to catch the morning sun.

Dimensions:

(H. 155mm W. 220mm D. 90mm - Approx Weight: 0.72KG)
