

Cold Light Fibre Optic Lighting System (AJ09)

The Photonic cold light fibre optic unit is of Austrian manufacture with a contemporary design which represents **excellent value for money**. The light source is a 30watt unit, and has variable light intensity control and can accommodate side filter insertion (optional extra).

The goose neck guide is a double leg version and is 550mm in length. The unit has a particularly low noise level and has a very easy bulb change system. The unique **Photonic optical component** eliminates the dark centre of the light cone, which is often a feature of other makes.

This increases the light intensity by upto 40%.

Each unit weighs 1.3Kgms and measures 268 x 168 x 120mm.
